

Medical Records – Demo Dataset

Hackathon Topic: Medical Document Intelligence & Patient Timeline

Important: These are synthetic/demo records created for prototype and hackathon use. They do not represent a real patient.

Sample Medical Record — Patient 1

Patient ID	PT-1001
Name	Arun Kumar
Age	42
Gender	Male
Blood Group	B+
Allergies	Penicillin

Medical History

- Type 2 Diabetes — diagnosed in 2021
- Hypertension — diagnosed in 2022
- No previous surgery

Recent Medical Records

Date	Document	Findings	Treatment
05-Jan-2026	Blood Test	HbA1c: 8.2%; Glucose: 186 mg/dL	Diabetes medication continued
20-Feb-2026	Doctor Visit	BP: 148/92	BP medication adjusted
15-Apr-2026	Blood Test	HbA1c: 7.6%	Continue medication + diet control
10-Jun-2026	ECG Report	Normal sinus rhythm	No cardiac intervention
02-Aug-2026	Doctor Visit	BP: 132/84	Continue current treatment

AI-Generated Patient Timeline

2021: Diabetes diagnosed
↓
2022: Hypertension diagnosed
↓
Jan 2026: High HbA1c detected
↓
Feb 2026: High BP detected → medication adjusted
↓
Apr 2026: HbA1c improved
↓
Jun 2026: ECG normal
↓
Aug 2026: BP controlled → follow-up advised

Document Types for the Prototype

1. Prescription

Medicine name, dosage, frequency, and duration.

2. Blood Test Report

Hemoglobin, glucose, HbA1c, cholesterol, creatinine, and other lab values.

3. Discharge Summary

Admission date, diagnosis, procedures, medications, and discharge instructions.

4. Radiology Report

X-ray/CT/MRI findings, impression, and recommendations.

5. Doctor Consultation Note

Symptoms, diagnosis, treatment, and follow-up.

Prototype Workflow

Upload medical documents → OCR / document extraction → AI identifies patient information, diagnoses, medicines and lab values → Information is normalized → Chronological patient timeline is generated → Important alerts and medication history are displayed
